

AUTOCHEF 2.0™

Let's Automate your Cook Room!

AutoChef 2.0™ is a recipe-based batch operating system that streamlines your cooking process by automating tasks that would otherwise dominate an operator's time. Take control of your operation by letting your cooker do the work for you.

HAVING TROUBLE FINDING SKILLED LABOR?

Let your recipe run itself until expert intervention is necessary. AutoChef 2.0 reduces the demand on labor, by guiding unskilled operators to making skilled decisions. Your cooker will run without you, until a human touch is needed to bring the magic to your recipes.

STRUGGLING WITH PRODUCT CONSISTENCY?

Standardize recipes and remove variability to improve your first bag/last bag consistency. By automating each batch, you can expect controlled repeatable results in every package.

IS THE COOK ROOM YOUR BOTTLENECK?

Optimize your batch times by creating a standard for all operators to follow. AutoChef 2.0's operating system enforces operators to run recipes exactly as you set them. Improve your OEE and get as much out of your cooker as you can.

10,000 RECIPES, STEPS, & INGREDIENTS

- No longer be limited by legacy panel view or PLC memory restrictions.
- Create and store complex recipes that all operators must follow.

ON DEMAND RECIPE SCALING

- Create and store complex recipes that all operators must follow.
- Make the most of limited ingredients by automatically scaling your recipe as needed.

CUSTOM INTEGRATION OPTIONS

- Merge with current in-house systems for ERP management.
- Access to raw machine data to generate specialized reports for your needs.

REMOTE SUPPORT FOR IMMEDIATE SOLUTIONS

- Engineers specialized on your machine can connect remotely to diagnose and advise on any problems your machine may be experiencing.

TRACK HACCP REQUIRED DATA

- Keep record of temperature trends and cook times.
- Stay on top of thermometer calibration needs.

MULTILINGUAL PREFERENCES FOR EACH OPERATOR

- Switch between languages in moments to ensure everyone has the resources they need.

STAY CLOSE, EVEN AT A DISTANCE

Is your company struggling with labor shortages & rising costs?

You need ARTIS on your team!

Blentech's data analytics tool, ARTIS™, solves these problems. ARTIS™ is an AI enhanced historian system that contextualizes data to optimize and increase productivity while keeping your data secure using multi factor authentication. ARTIS™ can be enabled on any batch production or batch processing systems such as cookers and mixers and is capable of integrating with any platform. Schedule your demo today at blentech.com

STAFF YOU CAN DEPEND ON

- Reduce training timelines.** ARTIS™ provides intelligence to assist less experienced workers.
- Enable remote workers.** Lower the skill threshold for operators.

INCREASE PRODUCTIVITY

- ARTIS™ creates autonomy with oversight.** Optimized for productivity and machine life. Get more out of what you have for less.
- Manage spare parts costs** to fully optimize productivity across the board.

DEVIATION DETECTION

- ARTIS™ daily reporting provides performance based on a benchmark** to help you easily target and isolate unpredictable problem scenarios.
- Deviations from normal steps are exposed** to allow for immediate coaching and correction.

MINIMIZE START UP EXPENSES

- Get up and running faster.** Have better control of start up costs and time to productivity using ARTIS™ reporting.
- More quickly detect problems** and apply a solution.

MAXIMIZE EQUIPMENT LIFE

- Real time tracking shows deviations** to recipes or cleaning cycles.
- Determine impact of changes using ARTIS™ batch analysis tool** to reveal deviations from statistical norm. Measure Impact on parts and machine wear time

OPTIMIZED FOR MACHINE LEARNING

- Convert problems into action** when variables that matter are presented by ARTIS™.
- ARTIS™ will tell you** which matter; which matter together, and which matter in order of importance.
